

### Option Pricing & Market Information

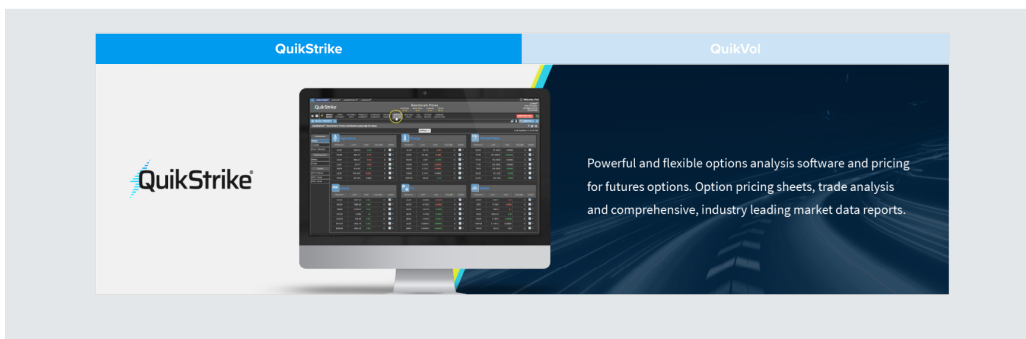

QuikStrike offers powerful and flexible options analysis and pricing tools via an easy-to-use, web-based interface. View prices on outright options or spreads with comprehensive page level analysis controls. Market data reports ranging from open interest to the term structure of volatility.

### Historical Volatility

View historical data for currently active expirations as well as complete implied volatility history for expired contracts. Identify year over year volatility trends with our seasonal volatility charting and reporting tools. Constant maturity and volatility cone charts are also available for spotting cheap or rich implied volatility levels.

QuikStrike is an [options analysis software](#) application targeted for the futures options market. Our easy-to-use, web-based interface puts options analysis and pricing at your fingertips.

QuikStrike Essentials is a free version exclusively available on the CME Group website. View option pricing sheets, open interest, settlements, volatility curves and assorted option tools.

### Pricing Sheets & Analysis

Our standard pricing sheets and option spread pricing sheets each contain a built-in options analysis toolbar that provides an elegant interface for pricing options and manipulating option pricing inputs for advanced option pricing and option data calculations. Control all options pricing inputs individually or use the Forward picker to simulate option roll pricing directly on the option pricing and spread pricing sheets as well as the option spread building tools. Toggle between alternate pricing models for an even more comprehensive look at the available options pricing data.

### Trade & Risk Analysis

Trade building and scenario analysis are an integral part of any brokerage or trading desk. With our QuikStrike option analysis software, you can build, price, analyze and save simple or complex spreads with just a few clicks of the mouse. For more advanced portfolio management, use our suite of risk management tools with trade blotter and snapshot tools, risk analysis and market or theoretical P&L reports.
